

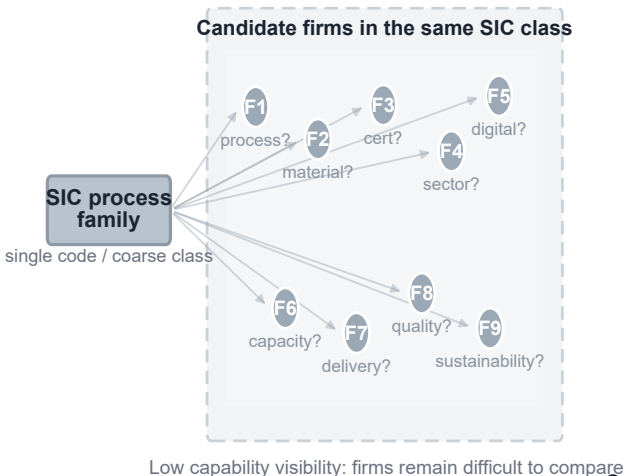

Figure 4. Capability-level visibility enabled by RMCT

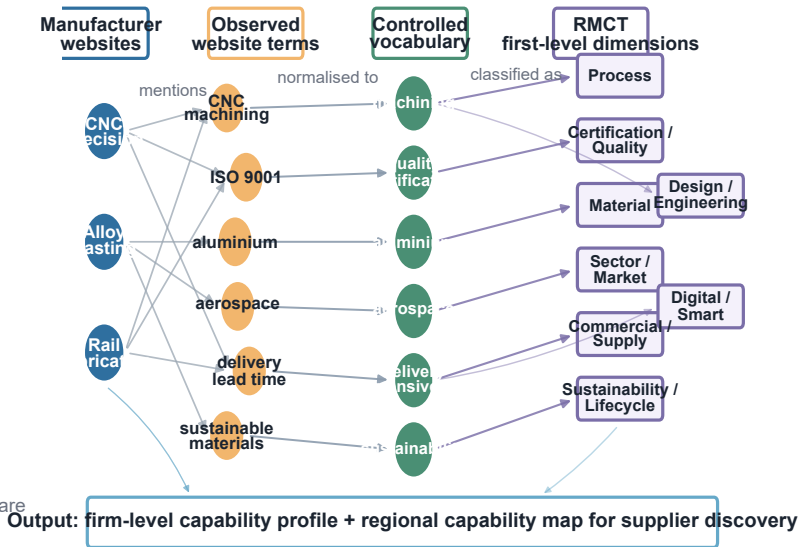

(a) SIC-based visibility

A shared industrial code identifies a broad firm pool, but not the capabilities needed for supplier search.

(b) RMCT capability evidence graph

Public website terms are normalised into preferred labels and classified into RMCT dimensions for capability search.

● Company ● Website term ● Preferred label □ RMCT dimension

Evidence edges indicate public website mentions and taxonomy classification; no buyer-supplier transaction links are inferred.
